MODERN PLANTERS

+ SITE FURNISHINGS

Built with a regard for the natural landscape, sustainability, and the enduring appeal of pure architectural form, Greenform has created a reputation for designing products that suit interior and exterior living spaces.

We believe that well-considered form enhances our environment, and take pride in crafting sculptural planters and furnishings that provide a distinctive look for commercial, hospitality, and residential projects. We are a privately owned company that relies on a thoughtful blend of highly skilled craftsmanship and technological acumen to be not only a great source for design, but also a reliable source for landscape and interior architecture solutions.

Our products are made of natural, durable, recyclable, lightweight fiber cement. We manufacture in Europe, and each product is hand formed and signed by individual artisans. Greenform offers the best of modern design in a timeless and enduring material.

Rainer Mutsch, Product Designer

We often speak of Greenform's commitment to providing individually hand-crafted pieces. For a glance behind the scenes, we invite you to meet Rainer Mutsch, one of the designers creating our product.

Connecting to the Material

"To quote the Swiss designer Willy Guhl (1915–2004), 'there is no *good* or *bad* material, what makes the difference is its right and adequate use.' My designs are in general material driven. Before I start with the first sketch I love to take my time and visit the production facilities, talk to the workers about the material's advantages and disadvantages and learn about its history."

Working Through Design Challenges

"For Dune my goal was to create a piece of furniture made out of one entire fiber cement plate with practically no offcuts. A lot of research and many prototypes were necessary to get the maximum stability out of the fiber cement. Eventually, the geometry of the chair supported its stability through the controlled expansion and compression of the material. Dune combines maximum stability with minimal material thickness."

From Europe to California

Greenform takes pride in being the sole U.S. provider of containers created from lightweight fiber cement. Noted for its natural, durable and recyclable traits, fiber cement is an enduring and versatile material suitable for hot and cold climates. Greenform's showroom and FOB point is in Los Angeles, California.

What is Fiber Cement?

Fiber Cement is a mixture of Portland cement, reinforcing fibers, air, and water. Initially moldable, the material slowly solidifies into a water and humidity resistant form.

portland cement • 40%

The binding material is Swiss Portland cement, produced with sintered limestone and marly clay. Portland cement is the main component in all Greenform fiber cement products.

water • 12%

The water content remains within the fiber cement panel for a long time and contributes to the continuing strengthening (hydration) of the cement stone.

reinforcing fibers • 2%

Reinforcing fibers are synthetic and organic fibers made of polyvinyl alcohol and modified for fiber cement application. Similar fibers are widely used in fabrics, tissues, and fleece.

air • 30%

Microscopically small air pores serve as expansion chambers for freezing water and make the product frost proof. Fiber cement is a breathable material, while simultaneously being water and weather proof.

limestone • 11%

Inert additives improve certain characteristics of the fiber cement and optimize product quality.

cellulose fibers • 5%

Processing fibers serve as filters during the production process. They are mainly cellulose fibers widely used in the paper industry. Recycled waste paper is used to some extent.

Our base colors are anthracite, gray, and white.

Custom colors from the RAL series are made to order. Additional finishes and design options are available upon request.
